

URETHANE EDGES

- SurfaceWorks' proprietary urethane formula offers the perfect balance between durability and comfort.
- Extremely durable, impact and puncture resistant, SurfaceWorks' urethane edges are perfect for heavy use applications such as office, education, healthcare and hospitality.
- Comprised of approximately 65% soybean oil, PURTech® and PURWood® urethane edges are rapidly renewable and can contribute towards LEED credits.
- Offered in over 60 standard colors and 9 profiles, providing the variety required to suit your design needs.
- Polyurethane is inherently antimicrobial, which further reduces the spread of infection.
- UV stabilizers mitigate color fade and material breakdown due to light exposure.
- Permanently bonded seams do not allow liquids to seep into and collect at the seam between laminate and the edge, making our tops the only surface acceptable for many healthcare, education and food service organizations.
- Urethane edges are easy to clean; hot water and soap is all that is needed for most applications, but stronger cleaners such as Formula 409® or Clorox® Clean-up® Cleaner+Bleach are also suitable.
