Power/Data Placement: Conference Tables

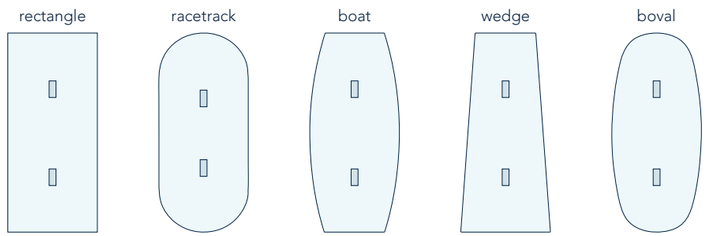

Power/data units (not including Rapport Power/Data Trough) will be placed on standard-shaped conference tables as outlined below, or provide a drawing indicating desired custom placement/orientation. A quantity of four or more units per table requires a drawing. When custom placement is required, we can provide assistance in determining optimal placement for your tables.

- 1 power/data unit per table: default placement is centered, oriented parallel with the length of the table.
- 2 or 3 power/data units per table: default placement is centered lengthwise, evenly distributed, avoiding base and/or other obstructions, and oriented parallel to the length of the table, and maintaining a minimum distance of 20" from the ends of the table.
- 4 or more power/data units per table: drawing is required.
- Please note that center power may not be available with all base types, shapes and sizes due to base and/or other obstructions. Please inquire before ordering.

Interlink Sequential System

The Interlink Sequential System allows for up to eight Nacre or Nacre Mini units to be connected in one sequential series.

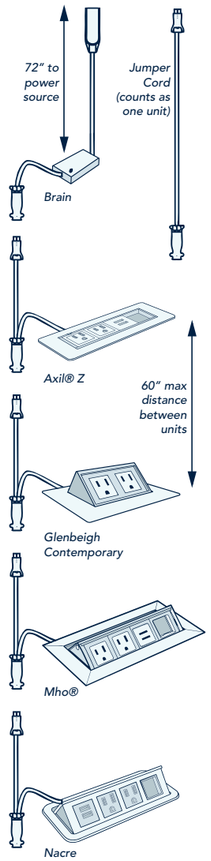

- Each unit in an Interlink System is individually numbered with uniquely configured, color-coded connections that cannot be interchanged. The first unit has a 10' cord with a standard 3-prong outlet plug. Each susbsequent unit has Interlinking 5' cords.
- You may link a maximum of eight units per chain, and the standard maximum distance between units is 60". Spans greater than 60" are possible; please call for assistance in specifying the correct components.
- Interlink Systems cannot be split into two separate chains, and cannot be joined to create a longer chain, or "Y" split into two directions.
- When adding to an existing Interlink® Sequential System, please specify the correct unit number(s) needed. For example, when adding two add-on units to an existing 3-unit system, specify units #4 & #5.
- Interlink Systems are available with Nacre or Nacre-Mini Power/Data Units, in 300 Black, 348 Designer White (shown), 004 Folkstone and 385 HM Slate Grey (not shown).
- Please specify desired placement, or provide a drawing illustrating placement.
- Interlink Systems are available in corded version only; hardwire is not available.
- Other power/data configurations are available with the Nacre & Nacre-Mini; please inquire.

Conference Table Base Wire Management Options

Three style-specific base wire management options are offered. Please see below for options and detailed ordering instructions.

How To Order

When specifying an option for an individual base on a conference table, it is important to identify which base(s) should get the option(s). This is due to the face that on some conference tables, the bases on the same table can differ in size. Each base is numbered as per the example below; please use the correct base number you would like your option to be applied with. For wedge shape tables, base #1 is on the smaller end of the table.

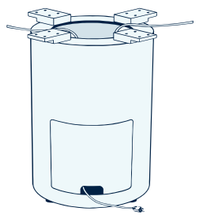

Jefferson Wire Access Door

The optional Wire Access Door easily snaps out for wire accessibility, while providing an ample pass-through point for cables and wires. (The Wire Pass-Through Cleats come standard with all Ovation & Jefferson bases, and provide easy and accomodating wire pass through between the base and the top.)

Power/Data Placement: Training Tables

Standard Placement
One or two power/data units per standard-shaped training table as outlined below.

- 1 unit per table: default placement is approximately 3" off the back edge, centered, and oriented parallel with the length of the table.
- 2 units per table: default placement is approximately 3" off the back edge, evenly spaced, oriented parallel with the length of the table.

Non-Standard Placement
Please provide a sketch, drawing or description that indicates your desired custom placement/orientation, or we can work with you to provide optimum placement of your power/data units.

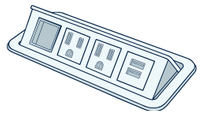

Nacre® Mini Power/Data Unit

Nacre® Mini keeps a low profile, but rises up when needed to reveal its range of power. Each 3" x 4.5" module includes one 15 amp simplex outlet and a choice of an open data port, USB-A charging duplex, or USB-C port. Universal Adapter Kit is included. Available in 300 Black, 348 Designer White, 004 Folkstone or 385 HM Slate Grey. Other colors and configurations are available; please inquire.

Interlink Sequential System

The Interlink Sequential System allows for up to eight Nacre or Nacre Mini units to be connected in one sequential series.

- Each unit in an Interlink System is individually numbered with uniquely configured, color-coded connections that cannot be interchanged. The first unit has a 10' cord with a standard 3-prong outlet plug. Each susbsequent unit has Interlinking 5' cords.
- You may link a maximum of eight units per chain, and the standard maximum distance between units is 60". Spans greater than 60" are possible; please call for assistance in specifying the correct components.
- Interlink Systems cannot be split into two separate chains, and cannot be joined to create a longer chain, or "Y" split into two directions.
- When adding to an existing Interlink® Sequential System, please specify the correct unit number(s) needed. For example, when adding two add-on units to an existing 3-unit system, specify units #4 & #5.
- Interlink Systems are available with Nacre or Nacre-Mini Power/Data Units, in 300 Black, 348 Designer White (shown), 004 Folkstone and 385 HM Slate Grey (not shown).
- Please specify desired placement, or provide a drawing illustrating placement.
- Interlink Systems are available in corded version only; hardwire is not available.
- Other power/data configurations are available with the Nacre & Nacre-Mini; please inquire.

IQ Non-Sequential System

The IQ non-sequential power system allows users to "daisy chain" multiple power centers together. The system's "brain" allows users to connect up to 8 power/data centers off of one infeed. iQ was even created with smart LED indicators that illuminate green when you're connected and ready to plug in and a red light when you've linked too many units.

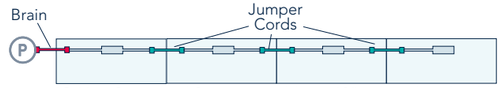

- The IQ Non-Sequential System consists of a "Brain" unit with starter cord and up to eight power/data units, which can be connected to each other in any order you choose.
- IQ Non-Sequential Systems are available with the following Power/Data units: Axil® Z, Glenbeigh Contemporary, Mho®, and Nacre® (see below for finish availability).
- Please specify desired placement, or provide a drawing illustrating placement.
- IQ Non-Sequential Systems are available in a corded version only; hardwire is not available.
- You may link a maximum of eight units per chain, and the standard maximum distance between units is 60"
- Spans greater than 60" are possible via the use of Jumper cords, however, each jumper cord counts as one unit towards the 8-unit maximum

IQ Non-Sequential System on tables ≤ 60" in length

IQ Non-Sequential System on tables > 60" in length

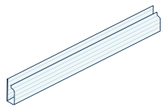

IQ Non-Sequential System on tables > 60" in length with added jumper cords (each jumper cord counts as one unit towards the 8-unit maximum.)

Scallops are 6" wide by 1-1/4" deep and will be placed along the back side(s) of the worksurface. Please specify scallops as an option as part of the worksurface line item on your purchase order. For custom scallops, please provide drawings indicating the required dimensions and placements. Custom scallops cannot be any closer than 2" from the ends. Not available with ABS edge.

Standard Scallop Placement

- If the side is ≥ 70", there will be two scallops placed 20" (on center) from each end.
- If the side is > 30" and < 70", there will be one scallop in the center.
- If the side is < 30", there will be no scallops.

Stiffeners

Due to environmental influences, sagging may occur unless the table top is supported properly. Since SurfaceWorks® has no control over how table tops will be installed, we can only warranty our product against sagging when and if the proper precautions have been taken. Steel stiffeners are a required accessory for table tops with a span of 45" or greater between supports. Even with a stiffener, the maximum unsupported span should not exceed 60" (see guidelines below). As it is your responsibility to determine if a stiffener is necessary, stiffeners are not included in the table top price, and are not automatically added to your order. Stiffeners will be shipped loose and are to be field installed. Kits include required mounting screws. Placement: Optimal stiffener placement is in the center, directly between the base plates/panels, however, it can be placed up to 6" off the center. If the stiffener must be placed further off center, it is highly recommended that two parallel stiffeners are placed on either side of the base plates. Please carefully factor in the dimensions and location of your base hardware/plates when determining which size stiffener to order.

- Dimension "A" should not exceed 20"
- If Dimension "B" is less than 45", a stiffener is not required
- If Dimension "B" is between 45" & 53.9", a 45" stiffener is required
- If Dimension "B" is between 54" & 60", a 54" stiffener is required
- Dimension "B" should not exceed 60" with or without a stiffener; additional supports are required
